Epithelial-stromal cell interactions in tissue repair and cancer

Dr Michael Cangkrama

Institute of Molecular Health Sciences

Bio

Michael Cangkrama earned his PhD from Monash University, Australia in the laboratory of Prof. Stephen Jane working on the mechanisms underpinning skin barrier development and maintenance. In 2015, he joined Prof. Sabine Werner's laboratory at the Swiss National Institute of Technology (ETH) Zürich, Switzerland. An exciting aspect of his current research is the analysis of the parallels between tissue repair and cancer at the molecular and cellular level, with a focus on the role of growth factors and matrisomes. In addition, he is currently developing new therapeutic strategies targeting the epithelial-stromal crosstalk for the treatment of skin fibrosis and cancer.

EVENT DETAILS

DATE:

Thursday, 30th January

TIME:

10:00am

VENUE:

G19
Ground Floor
15 Innovation Walk
Monash University
Clayton Campus

HOST:

Dr Harald Janovjak

The Australian Regenerative Medicine Institute (ARMI) acknowledges the generous support of Monash University and the Victorian State Government.
